

[MMH-1373] Modify button shouldn't be accessible for canceled deals !221

OLIVEIRA Marcio

- Introduce `isExpired` computed property in `useDealStatus` with enhanced input normalization.
- Update `FinancingActions.vue` and `Offer.vue` to include expired state checks when determining button visibility.
- Normalize deal status calculations for consistent handling of rejection, cancellation, and expiration states.

`useDealStatus.ts` composables

```
23 22    );
24 23
25    const isRejected = computed(() => status.value === REJECTED_STATUS);
26    const isCancelled = computed(() => status.value === CANCELLED_STATUS);
27    const isExpired = computed(() => status.value === EXPIRED_STATUS);
24    const isRejected = computed(
25      () => String(status.value).trim().toLowerCase() === REJECTED_STATUS.toLowerCase()
```

please make sure that all of the application ins cleansed of the word cancelled - we use canceled.

`useDealStatus.ts` composables

```
27    const isCancelled = computed(
28      () => {
29        const normalized = String(status.value).trim().toLowerCase();
30        return normalized === "cancelled" || normalized === "canceled";
31      }
32    );
33    const isExpired = computed(
```

by doing this we will have no more such weird situations
